Profile

I am a software developer with solid experience in web Front-end products and technology innovation projects.

I do have extensive experience in the creative industry, having devoted most of my career to dance and digital art. As a result, I've developed a solid knowledge of software engineering-oriented to computer vision and interactive technologies, working in several cross-functional teams. I am passionate about human-machine interfaces, especially in interactive content.

I got 3 years of experience in React, Redux, React Hooks, and functional components. Learning Type Script one day at a time.

I'm also an AI, Deep Learning enthusiastic researcher. Adversarial Learning for video, text, or image generation with models like Big GAN, pix2pix, vid2vid, and Tensorflow.js for browser applications are my current lab.

I'm constantly thinking about production, simple integration, and innovation. That's my creative soul.

Let us get in touch for any consultancy or collaboration.

Best.
